

control

Smart and simple.

Administrative tool for management of valuables and keys.

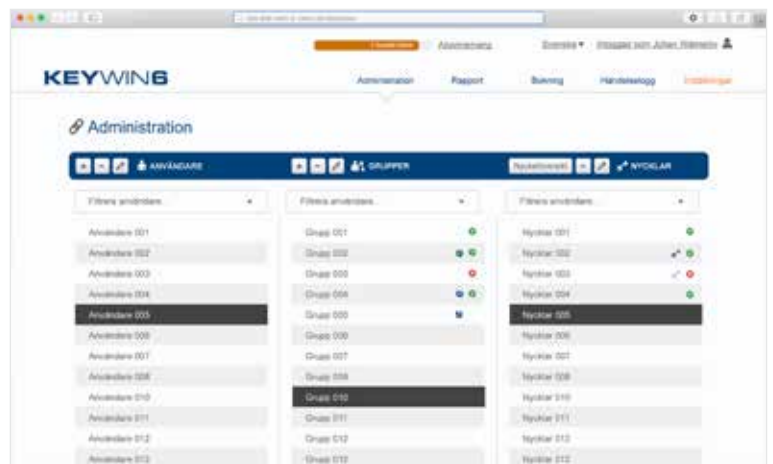

KEYWIN6 – powerful in the cloud.

Digital systematisation, monitoring and control.

Let us now show you the best possible way to administer your keys. We offer secure control and safe management, whether you handle a few – or a few thousand – keys.

Administration

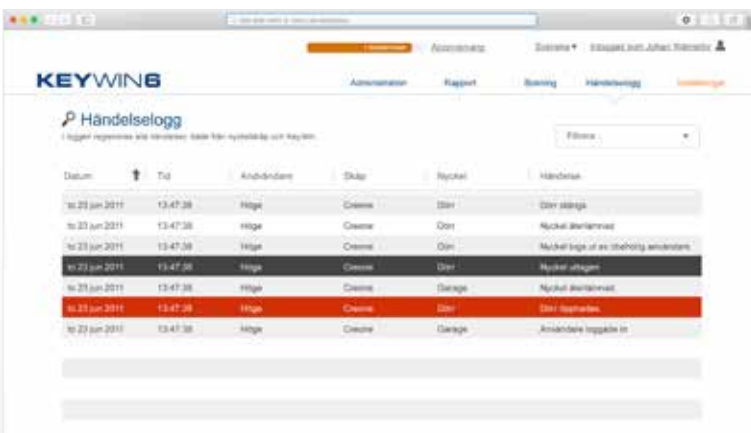

A smart search function makes it easy to get a complete overview. Find the right user or key easily. Mark a key to see which users and groups are linked to that specific key, or mark the user or group to see which keys have been linked to it.

Event log

View all events in the log or choose the parts you need. The intelligent search function, with select and timeframe options, makes it easy for you to get the information or report you need.

All alarms in the log are clearly indicated in red and give you clear information about what or who triggered the alarm.

VALUEBOX

Connect your value boxes

Connecting our Valuebox systems to KeyWin6 gives you additional control and more secure storage of your valuables. It enables you to check on keys and use as well as handling of valuables and equipment.

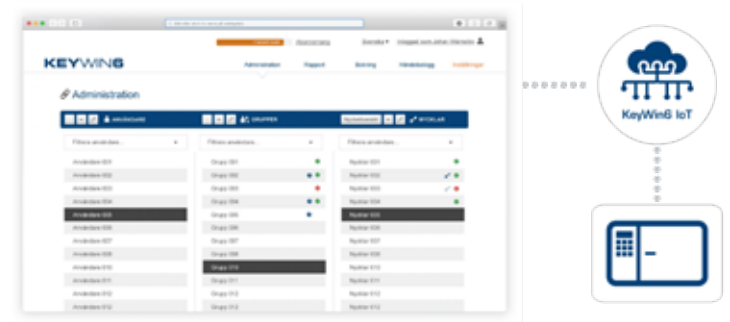

KeyWin6 is also available for mobile applications.

KeyWin6 IoT

NEW

Our KeyWin6 cloud service is based on IoT technology via Microsoft Azure. Simplicity is the key word in KeyWin6 IoT, despite its advanced, modern and secure technology. No on-premises software installation is required, our IoT products connect to the KeyWin6 cloud service exclusively through outbound communication. Advanced technology makes things simple and reduces costs for our customers – just the way it should.

Integration

NEW

Integrate with your other access control systems. Today we live in a connected world that requires different types of products to be able to communicate with each other. Our integration engine or API allows easy integration of your other systems into our ecosystem, which avoids unnecessary administrative overlaps.

Booking

The KeyWin6 key booking system also makes it easy for users to pre-book keys and ensures availability whenever you need them.

Report

Our KeyWin6 reporting system provides full control over your keys and user movements at all times, giving you a sense of how you could streamline your management. You can easily see the most frequent users and which keys have been checked out the most times. You also have a clear graph that describes how many keys have been taken out and how many alarms you had during a period.

Settings

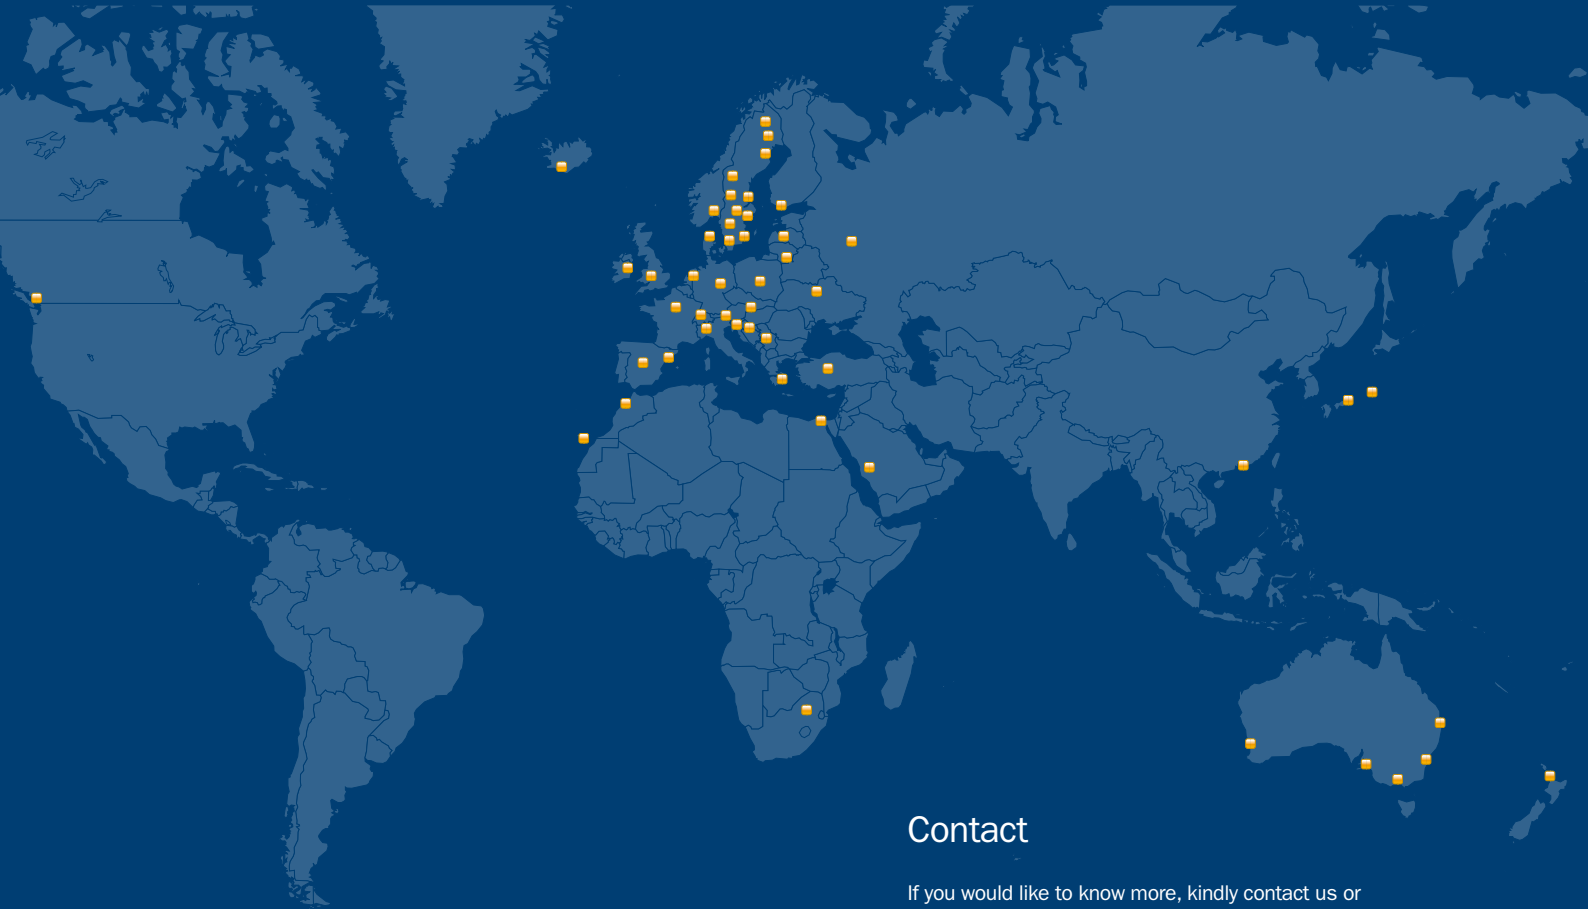

You can use the settings to install a new system and add or remove administrators. In the tool you can also manage more advanced settings such as language settings, the number of valid characters in codes and communication settings.

The image shows a screenshot of the KeyWin6 Administration web interface. It displays a table with columns for 'Användare', 'Nyckel', 'Status', 'Nyckel-ID', and 'Nyckel-ID'. The table lists several users and their associated keys.

Användare	Nyckel	Status	Nyckel-ID	Nyckel-ID
Johan	Nyckel 001	1001-1000-00	1001-1000-00	1001-1000-00
Mikael	Nyckel 002	1002-1000-00	1002-1000-00	1002-1000-00
Johanna	Nyckel 003	1003-1000-00	1003-1000-00	1003-1000-00
Richard	Nyckel 004	1004-1000-00	1004-1000-00	1004-1000-00
Stig	Nyckel 005	1005-1000-00	1005-1000-00	1005-1000-00
James	Nyckel 006	1006-1000-00	1006-1000-00	1006-1000-00
Mikael	Nyckel 007	1007-1000-00	1007-1000-00	1007-1000-00
Mikael	Nyckel 008	1008-1000-00	1008-1000-00	1008-1000-00
James	Nyckel 009	1009-1000-00	1009-1000-00	1009-1000-00
